Secured by Design

SBD

Police Preferred Specification

The IPGUARD® 4G/IP/GSM CLOUD Door Entry & Access Control system provides a more cost effective, efficient and sustainable solution.

Cost effective

No need for monitors, cabling to flats and proprietary equipment to repair or replace!

Efficient

No access to flats are required and 1 door installations are typically completed in less than three hours!

Sustainable

No new cabling and associated equipment. No more site interventions to program fobs, grant contractor access, communicate with residents, and much more!

Russells Wharf

Eight blocks for 70 flats completed in one week

Hodgson Court

IPGUARD 4G/IP/GSM video entry with dedicated Wi-Fi enabled tablets as monitors.

The challenge

The previous hardwired system had started to fail and the cost to the housing association for repairs and reactive call-outs was huge.
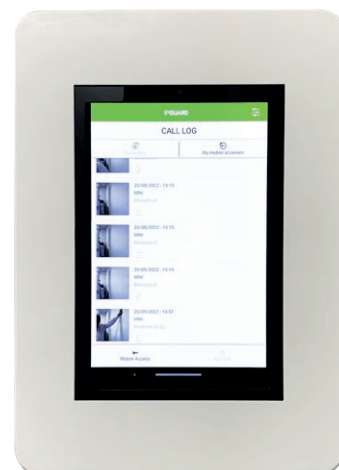

The site was comprised of 160+ flats including multiple short-term residencies that were used by NHS on-call staff.
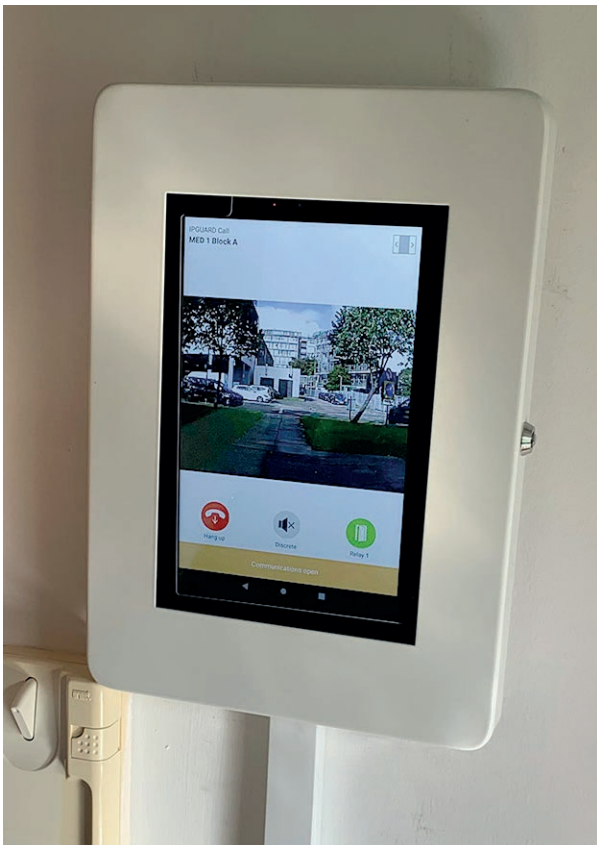

The solution

IP Door Entry proposed a hybrid wireless system. This employed the IPGUARD 4G/IP/GSM in conjunction with dedicated wireless tablets secured in lockable enclosures.

This meant that the permanent residents could use their own devices to communicate with their vistors and grant access.

At the same time, the short term stay homes received visitor calls on their dedicated tablets. The tablets were restricted so that only the IPGUARD APP could be accessed and each one was secured in an anti-theft lockable enclosure. Each tablet just needed to be connected to the home's Wi-Fi and plugged into the wall. It did not require re-cabling to the riser cupboards.
