

## LONDON BOROUGH OF NEWHAM

### A CASE STUDY

IPGUARD MINI PLUS  
4G/IP/GSM

“I have from the outset been very impressed at the ease of use and the versatility of the CLOUD system. The changes made are immediate and the reporting tool is exceptionally useful within tenancy management. IP Door Entry’s support and advice is to be commended and I appreciate all the time spent supporting me through this transition.”

Lario Solomons, Resident Services Officer,  
Client Relations, London Borough of Newham

Police Preferred Specification

**“Our experience of the IPGUARD & BATICONNECT SOLUTION has been very positive. The solution is very easy to use, cost effective, and the cloud-based portal is user friendly, which makes the management totally hassle free and keeps us in control.”**

**Sam Basset, Principal Building Surveyor & Works Commissioning, London Borough of Newham**

IP Door Entry Ltd are at the forefront of the Smart Visitor Door Entry revolution.

IP Door Entry Ltd supplies the IPGUARD® 4G/IP/GSM Smart Visitor Door Entry & Access Control ranges together with the associated BATICONNECT CLOUD management platform via partner security equipment installation, maintenance and distribution companies throughout the UK.

Additionally, IP Door Entry Ltd partners with local authorities, housing associations and property management companies to upgrade their old legacy hardwired door entry systems.

It is simply too costly and wasteful for them to continue attempting to maintain and program a random portfolio of often obsolete and always old technology hardwired door entry and access control systems.

Modern technology has made the solutions simple, cost effective and so much better in every aspect of performance and security.

An upgrade to a modern IPGUARD Smart 4G/IP/GSM Visitor Door Entry never requires any cabling to the flats and, better still, there is never any system proprietary equipment in the risers or flats that needs to be purchased and maintained. So no access to flats required – ever – also perfect for COVID compliance.

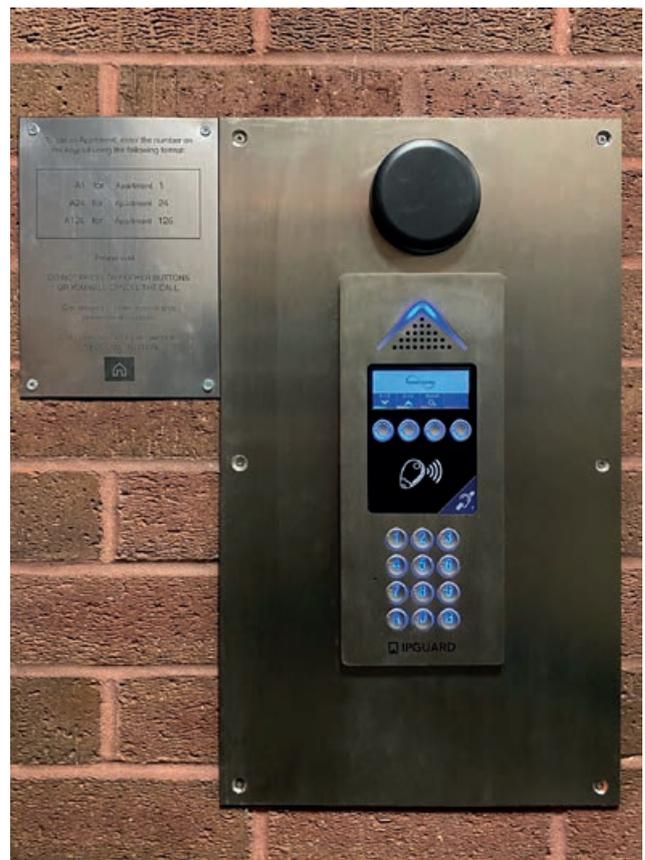

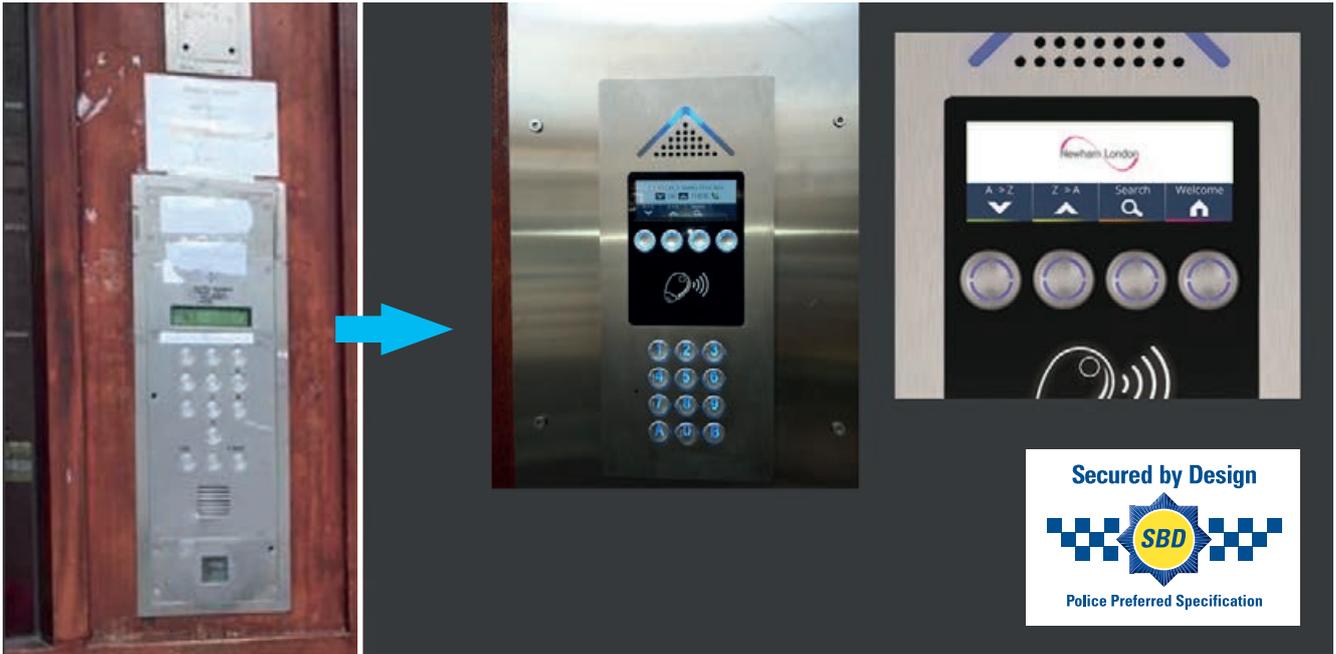

IPGUARD Smart 4G/IP/GSM Visitor Door Entry and its associated Resident Access Control system is fully CLOUD based. The BATICONNECT CLOUD means that: all programming of proximity key fobs, radio transmitters, resident phone numbers; all access control data logs; all alerts and so much more are managed remotely, in real-time, using any internet enabled device – so any computer – 24/7/365.

Residents use their own communication devices to respond to visitors calling from the IPGUARD smart door panels. Whatever they usually use to call friends, check their bank, browse the internet – so any mobile phone, iPad, tablet, landline is what the IPGUARD smart visitor panel will also call.

The London Borough of Newham have achieved their goals: an upgrade in security for their residents; full compliance with all Equality Act (DDA) legislation; total remote management control; future-proofing; consistency; monetary savings.

BEFORE

Upgraded to IPGUARD 4G/IP/GSM

### KCP8000 Proximity Keyfob for residents

- KCP8000 proximity keys are each engraved with a unique 10 digit ID number.
